ANESTHETIC MANAGEMENT OF ENDOVASCULAR AORTIC SURGERY
Dr. Maged Argalius, MD
Staff, Department of General Anesthesiology, Assistant Professor of Anesthesiology
Cleveland Clinic Lerner College of Medicine of Case Western Reserve University
The Cleveland Clinic Foundation

The goals and objectives:
Anesthetic management of endovascular aortic surgery:
• To understand the perioperative anesthetic management of patients undergoing aortic aneurysm stenting.
• To identify the perioperative complications of patients undergoing aortic aneurysm stenting, including the types of endoleaks and their significance.
• To comprehend the rationale for neurological and renal protection strategies in patients undergoing endovascular stenting.
• To recognize the influence of operative technique and surgical expertise on the choice of intraoperative monitoring.
